

How a request is processed and sent to a department

Demo-labelled everywhere

No real money

Nothing filed with any government system

* Simulated routing only — Praja-RTI prepares the application for the chosen department; it never contacts any government system.

New: sensitive-request guard

If a request targets exempt material — national security, cabinet papers, trade secrets, or an official's personal details unrelated to public duty (RTI Act, Sec 8(1)) — the agent refuses to draft it. The citizen gets a short, plain-language summary stating which exemption applies and why, plus a lawful reframing where one exists. No draft, no lecture, no dead end.

New: photo evidence, read by AI

While filing, the citizen can attach photos of the incident. A vision pass extracts only what is clearly observable (scene, visible signboards, apparent condition). Each finding is read back and enters the draft only after the citizen confirms it; photos are referenced as attached supporting evidence in the standard filing format — never as accusations. Offline demo mode uses a labelled simulated analysis.

The transformation judges remember

Raw grievance (would be rejected):

"The road outside my house in Sector 4 is broken for months. Why is the government not fixing it? Officers are corrupt!"

Agent-authored RTI draft (admissible):

Please provide certified copies of: (1) the work order, sanctioned budget and contractor details for Road #12, Sector 4; (2) the scheduled completion date and delay-penalty clauses; (3) quality inspection reports submitted by the site engineer.
